Fuel Tank

The following octane rating gasoline is recommended in the fuel tank. Avoid filling the tank in the rain or where heavy dust is blowing so that the fuel does not get contaminated.

A. Fuel Tank

⚠️ WARNING

WARNINGS indicate a potential hazard that could result in personal injury or death.

HAZARD
Refueling without following proper precautions.

WHAT CAN HAPPEN
Gasoline is extremely flammable and can be explosive under certain conditions.
A fire or explosion can cause severe injury or death.

HOW TO AVOID THE HAZARD
When refueling, do not smoke. Turn the ignition key to "OFF". Make sure the area is well ventilated and free from any source of flame or sparks; this includes any appliance with a pilot light.
Never fill the tank completely to the top! Heat may cause the fuel to expand and overflow through the vent in the tank cap.
After refueling, make sure the fuel tank cap is closed securely.
If gasoline is spilled on the fuel tank, wipe it off immediately.
Fuel Requirement:
Your Kawasaki engine is designed to use unleaded gasoline. However, if suitable gasoline is not available then PREMIUM, SUPER or FOUR STAR gasolines may be used.

Octane Rating
The octane rating of a gasoline is a measure of its resistance to detonation or "knocking." The term commonly used to describe a gasoline’s octane rating is the Research Octane Number (RON). Always use a gasoline with an octane rating equal to, or higher than, Research Octane Number (RON) 91.

NOTE
- If "knocking" or "pinging" occurs, use a different brand of gasoline or higher octane rating.
