Indicator/Warning Lights

The indicator lights are next to the ignition switch and the warning light (KLF400 only) is in the speedometer face.

**NEUTRAL:** When the transmission is in neutral, the neutral indicator light is lit.

**REVERSE:** When the transmission is in reverse gear, the reverse indicator light is lit.

**TEMP:** The coolant temperature warning light comes on whenever the coolant temperature rises to 115°C (239°F) or higher while the vehicle is in operation. If it stays on, stop the engine and check the coolant level in the reserve tank after the engine cools down.
