Never Drink and Drive
Alcohol and drugs impair your judgement and slow your reactions. Even drugs prescribed by a physician can be dangerous. Check with your doctor.

Keep Your Feet on the Pegs and Hands on the Handlebars
Always ride with your feet on the footpegs. If your feet touch the ground while you are moving, you could be injured. It is possible to have the rear wheel run over your foot.

If you have a lot of motorcycle experience, your natural reaction to the vehicle tipping or skidding may be to put a foot down. This is a reaction you must "unlearn."

Also, removing your feet from the footpegs and removing your hands from the handlebars can cause you to lose your balance and fall off the ATV. Keep your hands and feet on the ATV always.
Before Starting the Engine

Three "musts" before starting the engine are:
1) Set the parking brake,
2) Put the transmission in neutral,
3) Check the throttle for proper operation. It should snap closed when released with the handlebars in any position.

Use the Parking Brake
Always apply the parking brake before getting off your vehicle. If it should roll, it might be damaged or cause injury.

</table>
Removing hands from handlebars or feet from footpegs during operation.

WHAT CAN HAPPEN
Removing even one hand or foot can reduce your ability to control the ATV or could cause you to lose your balance and fall off the ATV. If you remove a foot from a footpeg, your foot or leg may come into contact with the rear wheels, which could injure you or cause an accident.

HOW TO AVOID THE HAZARD
Always keep both hands on the handlebars and both feet on the footpegs of your ATV during operation.
