Before Starting the Engine

Three "musts" before starting the engine are:
1) Set the parking brake,
2) Put the transmission in neutral,
3) Check the throttle for proper operation. It should snap closed when released with the handlebars in any position.

Use the Parking Brake

Always apply the parking brake before getting off your vehicle. If it should roll, it might be damaged or cause injury.

WARNING

HAZARD
Removing hands from handlebars or feet from footpegs during operation.

WHAT CAN HAPPEN
Removing even one hand or foot can reduce your ability to control the ATV or could cause you to lose your balance and fall off the ATV. If you remove a foot from a footpeg, your foot or leg may come into contact with the rear wheels, which could injure you or cause an accident.

HOW TO AVOID THE HAZARD
Always keep both hands on the handlebars and both feet on the footpegs of your ATV during operation.

CAUTION

The brake light goes on whenever you apply the parking brake. If you leave the brake light on for a long time, the battery may become totally discharged. Whenever you leave the vehicle, turn off the ignition key.
