General Lubrication
In accordance with the Periodic Maintenance Chart, have the general lubrication performed by an authorized Kawasaki dealer or perform it referring to the Service Manual for this vehicle.

Cleaning
To prolong the life of your vehicle, wash it down immediately after it has been splashed with sea water or exposed to salt air, or operated on rainy days, rough terrain, or in dusty areas.

Preparation for Washing
Before washing, precautions must be taken to keep water off the following parts.
- Muffler rear opening – cover with a plastic bag.
- Ignition switch – cover the keyhole with tape.
- Air cleaner intake (middle on the rear cab frame top) – close both openings with tape, or stuff in rags.

Where to be Careful
Avoid spraying water with any great force near the following places.
- Front and rear brakes – if water gets into the brake drums, they will not work effectively until they have dried out.
- Under the seat – if water gets into the ignition coil or into the spark plug cap, it can ground out the spark. When this happens the vehicle will not start and the affected parts must be wiped dry.
