2. Turn lockout plate (B) over and install screw (A) as shown.

3. Tighten screw.

CONNECTING ATTACHMENT HYDRAULIC CYLINDER HOSES

⚠️ CAUTION: Escaping fluid under pressure can penetrate the skin causing serious injury. Avoid the hazard by relieving pressure before disconnecting hydraulic or other lines. Tighten all connections before applying pressure. Search for leaks with a piece of cardboard. Protect hands and body from high pressure fluids.

If an accident occurs, see a doctor immediately. Any fluid injected into the skin must be surgically removed within a few hours or gangrene may result. Doctors unfamiliar with this type of injury may call the Deere & Company Medical Department in Moline, Illinois, or other knowledgeable medical source.

1. STOP engine.

⚠️ CAUTION: Do not attempt to connect hoses to tractor couplers until all pressure is relieved in the hydraulic system.

2. Move SCV control lever (A) back and forth and side to side to relieve pressure in all lines.

3. Refer to attachment operator's manual for instruction on connecting hoses to couplers.
IMPORTANT: Selective control valve couplers are not compatible with agricultural equipment hose fittings.

4. Your John Deere dealer can supply parts to adapt couplers to agricultural hydraulic hoses.
